## Podcasts: STS 101

2008-08-08 15:33:00

By Eugene Raikhel

I may be the last person to have heard about this, but I'm going to post it anyway. The other day a friend told me about an excellent series of podcasts on CBC Radio One's [Ideas](#) program called [How To Think About Science](#).

The series is basically a set of interviews with many of the leading philosophers, historians, anthropologists and sociologists of science, geared for an educated non-specialist audience and very accessible. The interviewees include such scholars as [Simon Schaffer](#), [Bruno Latour](#), [Lorraine Daston](#) and [Ian Hacking](#), as well as McGill's very own [Margaret Lock](#) and [Allan Young](#).

I was surprised to see an academic discipline given such thorough coverage in a relatively mainstream media outlet, although the series is understandably framed as a look at science as an institution rather than STS per se.
